PROJECTS

Disease Prediction using Symptoms

- Users enter symptoms (e.g., fever, cough, fatigue) and the ML model predicts the most probable disease.
- Built using Random Forest Classifier achieving 85% accuracy on a custom dataset.
- Implemented data preprocessing, feature encoding, and model evaluation using Python and Scikit-learn.
- Model outputs the predicted disease name, helping users understand their condition before consulting a doctor.

Tech: Python • Scikit-learn • Pandas • Machine Learning
